drift Documentation

Release 0.2.9

Jeff Hinrichs

April 17, 2015

Contents

drift is a simplified control for virtualboxes that doesn't require the vm to be packaged in a specific and ill documented format. Which allows use to create your environment with Virtualbox and then drift will take care of bringing them up and shutting them down.

Example

```
$ drift up
```

Supports

Tested on Python 2.7
